

Microsoft® Office 365 Archive Migration Service

Many organizations wishing to migrate to Microsoft's Office365 have large volumes of historic emails stored in third-party archives (such as Symantec Enterprise Vault and Autonomy ZANTAZ EAS) and in personal archives (.PST files) that they need to protect and maintain seamless access to, both for end users and for compliance and e-discovery purposes.

Powered with **TransVault™** software, the Office365 Archive Migration Service restores the contents of legacy archives and PSTs directly into users' mailboxes hosted on the Office 365 service – directly across the network.

Selective Migrations:

Using TransVault software, your data can be selectively migrated according to sophisticated policies. For example, you can upload items belonging to specific users, departments or in selected folders; upload only emails with attachments or only upload messages where shortcuts still exist in users' inboxes. You can also migrate according to date, subject, recipient, and so on. Archived tasks, calendars and notes are also supported. TransVault Migrator can also be used to migrate data within an hybrid environment. E.g.:

- Upload mailbox archives < 2 years old to an onpremise **Exchange server**
- Upload Journal mailbox archive contents to the cloud.

Shortcut Management:

Most third-party archives replace archived items with a shortcut in Outlook. As part of the migration service, TransVault Migrator can optionally be used to remove shortcuts from user's mailboxes post migration. It can also keep track of shortcuts that have been re-folded by users; ensuring items are restored to the correct online folders.

Migration Benefits:

- Seamless transition of legacy archives and PSTs to Office 365
- Avoid the costs of maintaining on-premise archives and PSTs
- Selectively migrate data to suit business needs
- Fully audited to ensure chain-of-custody and meet compliance needs
- Create a single repository via which data can be managed and searched
- Eliminate the many risks and excessive costs of manual extractions from third-party and personal archives.

Migrate to Office365 from: Microsoft Exchange

- Autonomy Message Manager (CA Message Manager)
- Autonomy Digital Safe
- Autonomy ZANTAZ EAS
- Autonomy NearPoint (aka Mimosa)
- EMC EmailXtender
- EMC SourceOne
- ILumin Assentor
- Metalogix Archive Manager (previously Exchange@PAM)
- OpenText IXOS
- Symantec Enterprise Vault
- Quest Archive Manager
- Unify/Daegis AXS-One
- PST, EML or MSG files¹

Migrate to Office365 from: IBM Domino/Lotus Notes²

- Symantec Enterprise Vault
- EMC EmailXtender
- EMC SourceOne
- Autonomy ZANTAZ EAS
- Unify/Daegis AXS-One
- Autonomy Message Manager (CA Message Manager)
- NSF files

¹ Includes hosted archives that support these formats

² Notes migrations include on-the-fly conversion to Exchange format. Decryption is also available.
