

## VM-Hosted Enterprise Email Archive Migrations

As the problem-solvers of email archive migrations, we make complexity feel refreshingly simple. Powered by the same engine as Transvault Intelligent Migrator, Transvault Intelligent Migrator Cloud delivers secure, compliant, high-performance migrations from virtually any platform to Microsoft 365, now packaged for deployment on your own VM (on-prem or in your cloud).

## Why Transvault Intelligent Migrator Cloud is the best choice

- 1 Over 3400+ migrations**  
Including some of the largest and most complex in the world.
- 2 Secure, robust, adaptable and extensible software**  
With over 20 years continual development and innovation.
- 3 Industry leading, outcome focused support**  
Helps improve project responsiveness and migration success.
- 4 Legally defensible migrations**  
End-to-end chain of custody tracking provides verifiable proof that your data remains secure and unaltered during processing.
- 5 Superior end user experience**  
Streamlined processing minimises disruption, improving satisfaction and supporting continuous business operations.
- 6 Start proving ROI from your new service**  
Streamlined migrations quickly reduce your legacy infrastructure costs.

## Migration is a process, never a problem.

Transvault Intelligent Migrator Cloud securely and seamlessly migrates email archives with ultra-fast extractions and efficient ingestion into destinations like Microsoft 365. It moves journals, individual and shared archives, and all message types with full fidelity, delivering a one-step, end-to-end migration with no interim storage to ensure complete chain-of-custody and data security throughout.

## Changing the view on Email Archive Migrations

### Know what you need to do

- Understand your data. Transvault Intelligent Migrator Cloud examines legacy archives so you know precisely what information you hold.
- Move with precision. Selectively migrate based on size, owner, location, age or flags.
- Plan for compliance. With Transvault's Compliance Time Machine, journals are mapped into the Microsoft 365 compliance model from day one.

### Migration process

- Built for scale. On-premises or in the cloud, a multi-server, multi-location architecture maximises throughput and minimises delays.
- Secure transfer. Banking-style transactional methods prevent loss or tampering, while full audit trails confirm chain of custody.
- Compliance assured. Records are transferred with integrity and remain visible for eDiscovery for years to come.

### Post migration benefits

- Future-proof journals. Legacy journal data is preserved, discoverable, and supported in Microsoft 365, removing the need for costly, separate services.
- Seamless experience. Shortcuts and statuses are preserved, ensuring archives stay accessible post-migration.
- Confidence in results. Detailed reporting demonstrates exactly what has moved, when and how.
