Migration is a process, never a problem.

Transvault Intelligent Migrator securely and seamlessly migrates email archives with
ultra-fast extractions and efficient ingestion into destinations like Microsoft 365.

It moves journals, individual and shared archives, and all message types with full fidelity,
delivering a one-step, end-to-end migration with no interim storage. This ensures complete
chain-of-custody and data security throughout.

Changing the view on Email Archive Migrations

Know what you need to do

- Understand your data. Intelligent Migrator examines legacy archives so you know precisely what information you hold.
- Move with precision. Selectively migrate based on size, owner, location, age or flags.
- Plan for compliance. With Transvault's Compliance Time Machine, journals are mapped into the Microsoft 365 compliance model from day one.

Migration process

- Built for scale. On-premises or in the cloud, a multi-server, multi-location architecture maximises throughput and minimises delays.
- Secure transfer. Banking-style transactional methods prevent loss or tampering, while full audit trails confirm chain of custody.
- Compliance assured. Records are transferred with integrity and remain visible for eDiscovery for years to come.

Post migration benefits

- Future-proof journals. Legacy journal data is preserved, discoverable, and supported in Microsoft 365, removing the need for costly, separate services.
- Seamless experience. Shortcuts and statuses are preserved, ensuring archives stay accessible post-migration.
- Confidence in results. Detailed reporting demonstrates exactly what has moved, when and how.
