

# Environmental Health Assessment

Critical to the success of any email archive migration is ensuring the source environment is in the best possible state to allow for a successful migration.

Time and again we have seen complications in migrations caused by environmental factors. For example, the performance of the existing source archive server(s), underlying storage system, current user activity or network capacity may be sub-optimal to achieve the desired archive migration throughput.

Our service will review such issues to ensure the best possible migration outcome:

- Using our deep expertise in many different proprietary archiving platforms we can ensure your source archive system is in the healthiest possible state to allow for the best possible migration outcomes
- By conducting a health assessment of your archive platform(s) you can reduce any bottlenecks in the process, accelerate progress and ensure accurate results, free from preventable errors

**“From a technical standpoint... the expertise was just phenomenal compared to what we’d experienced with our previous migration vendor.”**

**Greg Hickey**  
Senior Account Executive at Daymark Solutions Inc

## Key benefits

### Why Transvault Environmental Health Assessments are a good choice

- 1 Integrated with our Managed Migration Services**  
Improve your potential of a faster, more efficient migration
- 2 Identify and remediate any potential risks**  
To the migration project prior to full deployment
- 3 Access deep, archive-specific expertise**  
Improving governance and control of your migration
- 4 Faster return on investment**  
Peace-of-mind you’ve done everything possible to ensure a successful migration
- 5 Improve actionable insight**  
Pinpoint activities to improve management of your archive for its remaining lifespan

## How it works

# Migration is a process, never a problem.

### Supported Platforms

- Symantec/Veritas Enterprise Vault  
(from EV v8 to current version)

### Output

- Our team conducts a full assessment of the source archive environment, documenting the assessment as we go. A Health Assessment Report is provided on completion, which includes recommended remedial actions that should be taken prior to a full migration
- If you need help to complete these actions on your source environment, our consultants can perform these for you (subject to a signed Statement of Work) to ensure the environment is in the best possible state for migration

"We're committed to using our extensive migration expertise to deliver the best migration outcome for our partners and their clients."
